Remsoft acquires Australian forestry technology firm LOGR

On October 20, 2025, Remsoft Inc., a global leader in forest intelligence solutions, acquired LOGR, an Australian forestry technology company recognized for its innovative real-time data capture and operational multi-party analytics platform.

The acquisition supports Remsoft's vision of a modular, data-driven platform that serves everyone in the forest sector, from landowners and contractors to public agencies and investors. Together, Remsoft and LOGR will deliver a single source of truth for forestry operations — from harvest planning to mill delivery — helping companies reduce reporting time, minimize manual data entry, and make faster, data-driven decisions that improve profitability, transparency and sustainability.

BLG represented Remsoft with a team led by Frazer House that included Akaash Viswanathan and Alexander Filip (M&A), and Danny Lang (Tax).

This cross-border acquisition builds on Remsoft's ongoing growth strategy, supported by Banneker Partners, to strengthen and expand its Forest Intelligence Platform through targeted investments. It follows Remsoft's earlier integration of geospatial and telematics capabilities through its partnership with Lim Geomatics.
